16400-28280 16400-28270 Custom Aluminum Car Radiator Spare Parts for Automobiles

Our Product Introduction

Basic Information

- Place of Origin: CHINA
- Brand Name: NABO
- Certification: TS16949
- Model Number: 16400-28280/28270
- Packaging Details: poly bag or air bubble bag, any boxes with customers' label, Corrugated box, Standard tray
- Delivery Time: 3-35 days
- Payment Terms: D/P, L/C, T/T

Product Specification

- Name: Automobile Spare Parts
- Country Of Origin: China
- Warranty: 12 Months
- Size: Standard
- Material: Aluminum
- Type: Car Radiator

Product Description

Product Description:

A car's cooling system is vital for keeping the engine functioning properly, and at the heart of this system is the radiator. Its job is to dissipate the heat created during the engine's combustion process and keep the engine from overheating. Radiators are typically made up of a core made of thin metal tubes or channels that are connected to inlet and outlet tanks. These tubes or channels serve to hold the coolant, the liquid that circulates through the engine and radiator to regulate the engine's temperature. The core is typically made of aluminum because it has high heat conductivity, allowing it to quickly absorb heat from the coolant. Meanwhile, the tanks that are connected to the core are usually made of plastic or aluminum.

Features:

Efficient Heat Dissipation: Our Car Radiator utilizes a high-density core made up of thin metal tubes and cooling fins enabling it to dissipate heat more efficiently. This design provides a more substantial surface area that increases the heat transfer, ensuring the efficient dissipation of heat produced by the engine. It also cools the coolant as it runs through the radiator, preserving the optimal operating temperature.

Durable Construction: With our radiator, you don't have to worry about frequent replacements. Its aluminum core is not only sturdy but corrosion-resistant, providing stellar heat conductivity and durability. The inlet and outlet tanks are also constructed out of high-quality materials, ensuring that the radiator performs optimally for a more extended period.

Enhanced Cooling Performance: The Car Radiator is designed to optimize cooling effectiveness, including the arrangement of tubes, fins, and coolant flow paths. This ensures efficient cooling, which in turn helps keep the engine at the ideal operating temperature. With this, you don't have to worry about engine overheating or potential damage.

Quality Assurance: At our company, we don't compromise on quality. That's why we have stringent quality control processes in place to ensure our Car Radiators meet the highest standards of performance and reliability. We perform thorough testing on each radiator to determine both optimal cooling efficiency and durability.

Warranty: We are confident about the quality of our Car Radiators. Hence, we offer a warranty, providing you with the peace of mind that your radiator is protected against any manufacturing defects or faults.

Technical Parameters:

Product Attribute	Value
Product Name	Automobile Spare Parts
Country of Origin	China
Type	Car Radiator
Material	Aluminum
Warranty	12 Months
Size	Standard

Applications:

The main job of a car radiator is to keep the engine cool by exchanging heat from the coolant that circulates through it to the air around it. This is accomplished by utilizing conduction, convection, and radiation.

Upgrade the cooling system of your vehicle with our high-quality car radiator. Enjoy better cooling performance, optimal engine temperature, and reliable operation. Trust in the long-lasting and effective nature of our car radiator to keep your engine functioning smoothly and lengthen the life of your vehicle.
